HOMEWORK 5

MATH 3120

Unless stated otherwise, the notation below is as in class. You can assume that all functions are C^∞ unless stated otherwise.

Question 1. Prove the differentiation of moving regions formula stated in class:

$$\frac{d}{d\tau}\int_{\Omega(\tau)} f\,dx = \int_{\Omega(\tau)} \partial_\tau f\,dx + \int_{\partial\Omega(\tau)} f v\cdot\nu\,dS. \tag{1}$$

(See the class notes for the notation and precise assumptions.) For simplicity, prove (1) in the following particular case. Assume that $n=3$ and that the domains $\Omega(\tau)$ are given by a one-parameter family of one-to-one and onto maps $\varphi=\varphi(\tau,x):\Omega\to\Omega(\tau)=\varphi(\tau,\Omega)$, where $\Omega:=\Omega(0)$ and $\varphi(0,\cdot)=\mathrm{id}_\Omega$, where id_Ω is the identity map on Ω, i.e., $\mathrm{id}_\Omega(x)=x$, $x\in\Omega$.

(a) For each fixed τ, consider the change of variables $x=\varphi(\tau,y)$, so that

$$\int_{\Omega(\tau)} f(\tau,x)\,dx = \int_\Omega f(\tau,\varphi(\tau,y))J(\tau,y)\,dy, \tag{2}$$

where $J(\tau,y)$ is the Jacobian of the transformation $x=\varphi(\tau,y)$ for fixed τ.

(b) Show that there exists a on parameter family of vector fields $u(\tau,\cdot)$ such that

$$\partial_\tau\varphi(\tau,x)=u(\tau,\varphi(\tau,x)).$$

(c) Explain why $u=v$ on $\partial\Omega(\tau)$.

(d) Show that

$$\partial_\tau J(\tau,x)=(\operatorname{div}u)(\tau,\varphi(\tau,x))J(\tau,x).$$

(e) Use (2) and the above to compute $\frac{d}{d\tau}\int_{\Omega(\tau)} f$, and do an integration by parts to obtain the result.

Question 2. Let u be a solution to the Cauchy problem for the wave equation in $\mathbb{R}^n$. Assume that u_0 and u_1 have their supports in the ball $B_R(0)$ for some $R>0$. Show that $u=0$ in the exterior of the region

$$I:=\{(t,x)\in(0,\infty)\times\mathbb{R}^n\,|\,x\in B_{R+t}(0)\,\}.$$

I is called a domain of influence for that data on $B_R(0)$ (compare with the $1d$ case).

Question 3. Let u be a solution to the Cauchy problem for the wave equation and assume that u_0 and u_1 have compact support.

(a) Show that the energy

$$E(t):=\frac{1}{2}\int_{\mathbb{R}^n}\left[(\partial_t u)^2+|\nabla u|^2\right]\,dx$$

is well-defined.

(b) Show that

$$E(t) = E(0),$$

i.e., the energy is conserved.

Question 4. Let u be a solution to the Cauchy problem for the wave equation in $\mathbb{R}^3$ with compactly supported data (i.e., u_0 and u_1 have compact support).

(a) Show that there exists a constant $C > 0$, depending on u_0 and u_1, such that

$$|u(t,x)| \leq \frac{C}{t}, \tag{3}$$

for $t \geq 1$ and $x \in \mathbb{R}^3$. Thus, for each fixed x, u approaches zero as $t \to \infty$, i.e., solutions decay in time.

Hint: Use the formula for solutions in $n = 3$. Since the data has compact support, it vanishes outside $B_R(0)$ for some $R > 0$. This implies an estimate for the area of the largest region within $B_t(x)$ where the data is non-trivial.

(b) Is the estimate (3) sharp? (I.e., can it be improved to show that solutions decay faster in time than $\frac{1}{t}$?)

(c) Do we still get decay if the data does not have compact support?
